Art Unit: 3753

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1 - 4, drawn to a shut down unit, classified in class 361, subclass 170+.
 - II. Claims 5 - 19, drawn to an electro-pneumatic controller, classified in class 137, subclass 487.5.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions II and I are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the combination does not require the details of the switch recited in the claims 1 – 4 directed to the sub combination. The subcombination has separate utility such as for any application calling for a two-position electronic switch.

3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

4. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
